

2 Wire Electronic Sounders

These 2-wire sounders provide the most cost effective solution available for combining both detection and alarm sounder operation onto a single conventional circuit. The products have been specifically developed to provide easy conversion of existing conventional systems to 2-wire operation without the need for other special 2-wire products.

As other system components such as the control panel, detectors and call points are standard, the cost benefits from existing suppliers remain as there is no need to purchase custom products from alternative sources. Implementation is straightforward, the 2-wire circuit is connected to a small interface unit (PIU), which then links between the normal detection and sounder circuits at the control panel. The interface is compact and can be easily incorporated into the panel during manufacture.

- THE MOST COST EFFECTIVE 2-WIRE SOLUTION AVAILABLE
- WIDE COMPATIBILITY
- NO NEED TO CHANGE EXISTING SUPPLIERS
- REDUCES STOCK HOLDING REQUIREMENTS AS SPECIAL PRODUCTS ARE NOT NEEDED
- ALLOWS THE CONTINUED USE OF ESTABLISHED WELL PROVEN PRODUCTS
- EXISTING DISCOUNTS FROM MAIN STREAM SUPPLIERS REMAIN
- COMPLIES WITH THE REQUIREMENTS OF BS5839 PART 1 WHERE APPLICABLE
- USES THE LATEST TECHNOLOGY LOW CURRENT SOUNDERS
